Part 1

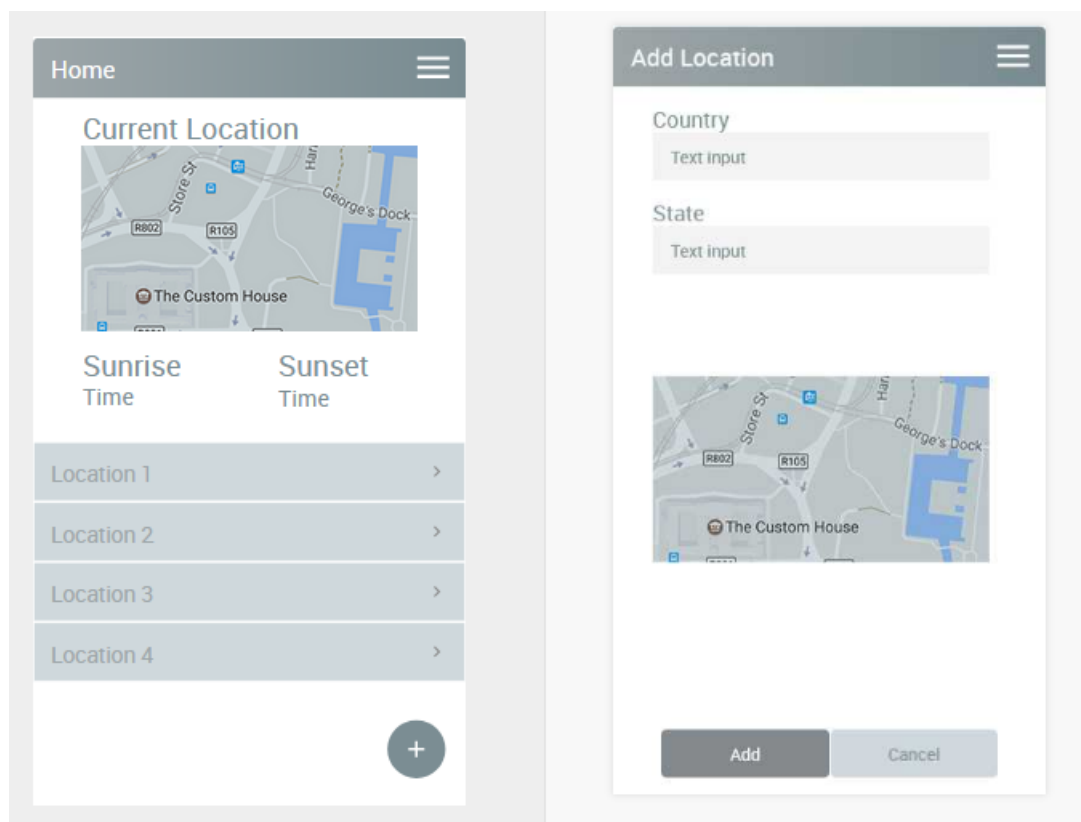

Figure 1: The home and add location screens

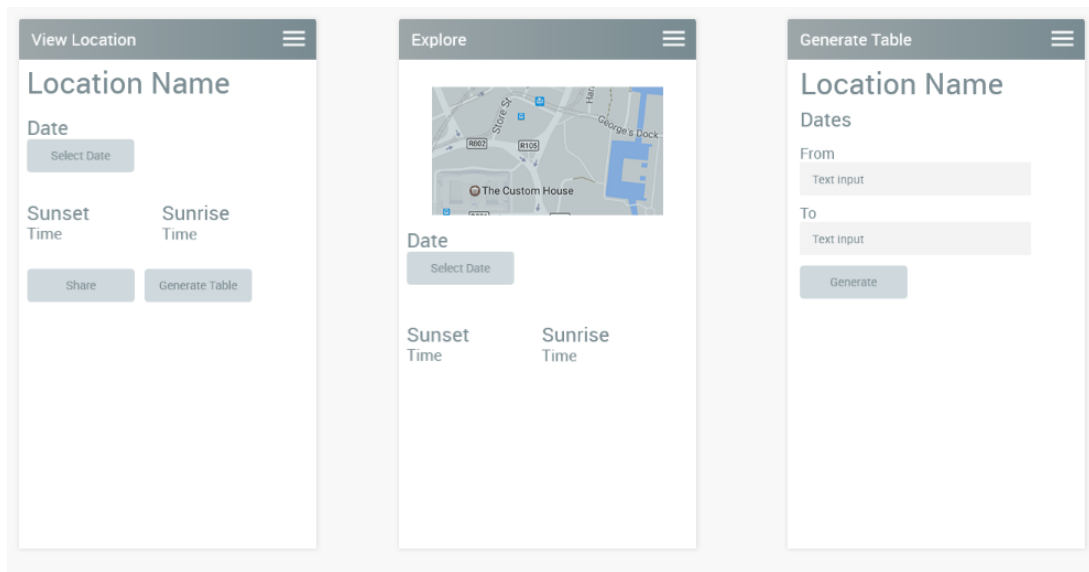

Figure 2: The view location, explore, and generate table screens

Part 2

- As a stargazer, I want to find the time of the local sunrise, so that I can schedule viewing times with minimal sunlight
 - User looks at home screen for information based on current location
- As a photographer, I want to view the sunrise and sunset times for the next 7 days so I can capture these events on camera.
 - User taps on saved location
 - User taps generate table
 - User enters time period they wish to check
 - User taps generate button
- As a traveller, I want to find the time of sunset for my holiday destination, so that I can plan my holiday events in advance dinner with a great view
 - User taps plus button
 - User enters location information
 - User taps location on home screen
- As a traveller, I want to share the sunset time with my partner, so that I can organize a dinner with a great view
 - User taps on saved location
 - User taps generate table
 - User taps generate
